## Diadochokinetic Syllable Rates Worksheet

Name: $\qquad$ Age: $\qquad$ Date: $\qquad$
Examiner: $\qquad$
Instructions: Time the number of seconds it takes your client to complete each task the prescribed number of times. The average number of seconds for children from 6 to 13 years of age is reported on the right-hand side of the table.

The standard deviation (SD) from the mean is also represented. Subtract the SD from the norm to determine each SD interval. For example, using the /pA/ norm with a 6 -year-old, $3.8(4.8-1.0)$ is one SD, 2.8 $(4.8-2.0)$ is two SDs, $2.3(4.8-2.5)$ is two-and-a-half SDs, etc. Therefore, a 6 -year-old child who needed 2.6 seconds to complete the $/ \mathrm{ps} /$ sequence would be two SDs below the mean.
