DRIVE Background

The Fresno Developing the Regions Inclusive Vibrant Economy (DRIVE) Initiative aims to directly address factors contributing to economic and racial inequity by building local power through a civic infrastructure (CI) network. The civic infrastructure (CI) network, included:

- Two large community-based organizations
- Nine small resident-led hyper-localized grassroots (hubs)

Fresno DRIVE has assembled the hubs for three main reasons:

1. build robust community voice and power
2. Serve as an access point for referrals and services
3. Lead neighborhood-sourced-and-staffed hyper-local improvement projects

DRIVE Background

Purpose

- Establish a baseline understanding of what residents felt about their neighborhood.
- This study focused on the residents' perspective on the ability to build civic infrastructure within their neighborhoods based on current assets and challenges.
 - Each hub is associated with a neighborhood in Fresno that geographically serves one of Fresno Unified School District elementary schools.
 - Addams
 - Birney
 - Calwa
 - Jackson
 - King
 - Lincoln
 - Webster South and North
 - Winchell

Methods

Monthly Trainings
July 2021-August 2022

Quantitative Data Collection
May-August 2022

Quantitative Analysis
September-November 2022

Methods Cont.

Quantitative Instrument

- Self-efficacy scale was computed as a mean of the following five Likert scale items developed by Romppel et al. (2013).
 - “I can find the means and ways to get what I want.”
 - “It is easy for me to stick to my aims and accomplish my goals.”
 - “Thanks to my resourcefulness, I know how to handle unforeseen situations.”
 - “I can solve most problems if I invest the necessary effort.”
 - “I can remain calm when facing difficulties because I can rely on my coping abilities.”
 - “No matter what comes my way, I’m usually able to handle it.”
- Neighborhood Equality was a dichotomous single-item measure.
 - “Do you feel that your neighborhood is treated equally to other neighborhoods by the local Fresno government?”

Demographics

Neighborhood	%
Webster	19.9%
Winchell	14.0%
Jackson	13.2%
Addams	11.8%
Lincoln	11.8%
King	11.0%
Birney	9.6%
Calwa	8.8%

Race & Ethnicity	%
Hispanic or Latino	68.7%
Black or African American	10.3%
White	9.6%
Asian or Pacific Islander	8.8%
Multiracial or Biracial	1.5%

Age Groups	%
35-49	28.7%
18-34	21.3%
50-64	20.6%
65 and above	8.8%

Gender	%
Female	66.9%
Male	31.6%

Findings: Self-efficacy

Note:
*F= 2.6; P = 0.015

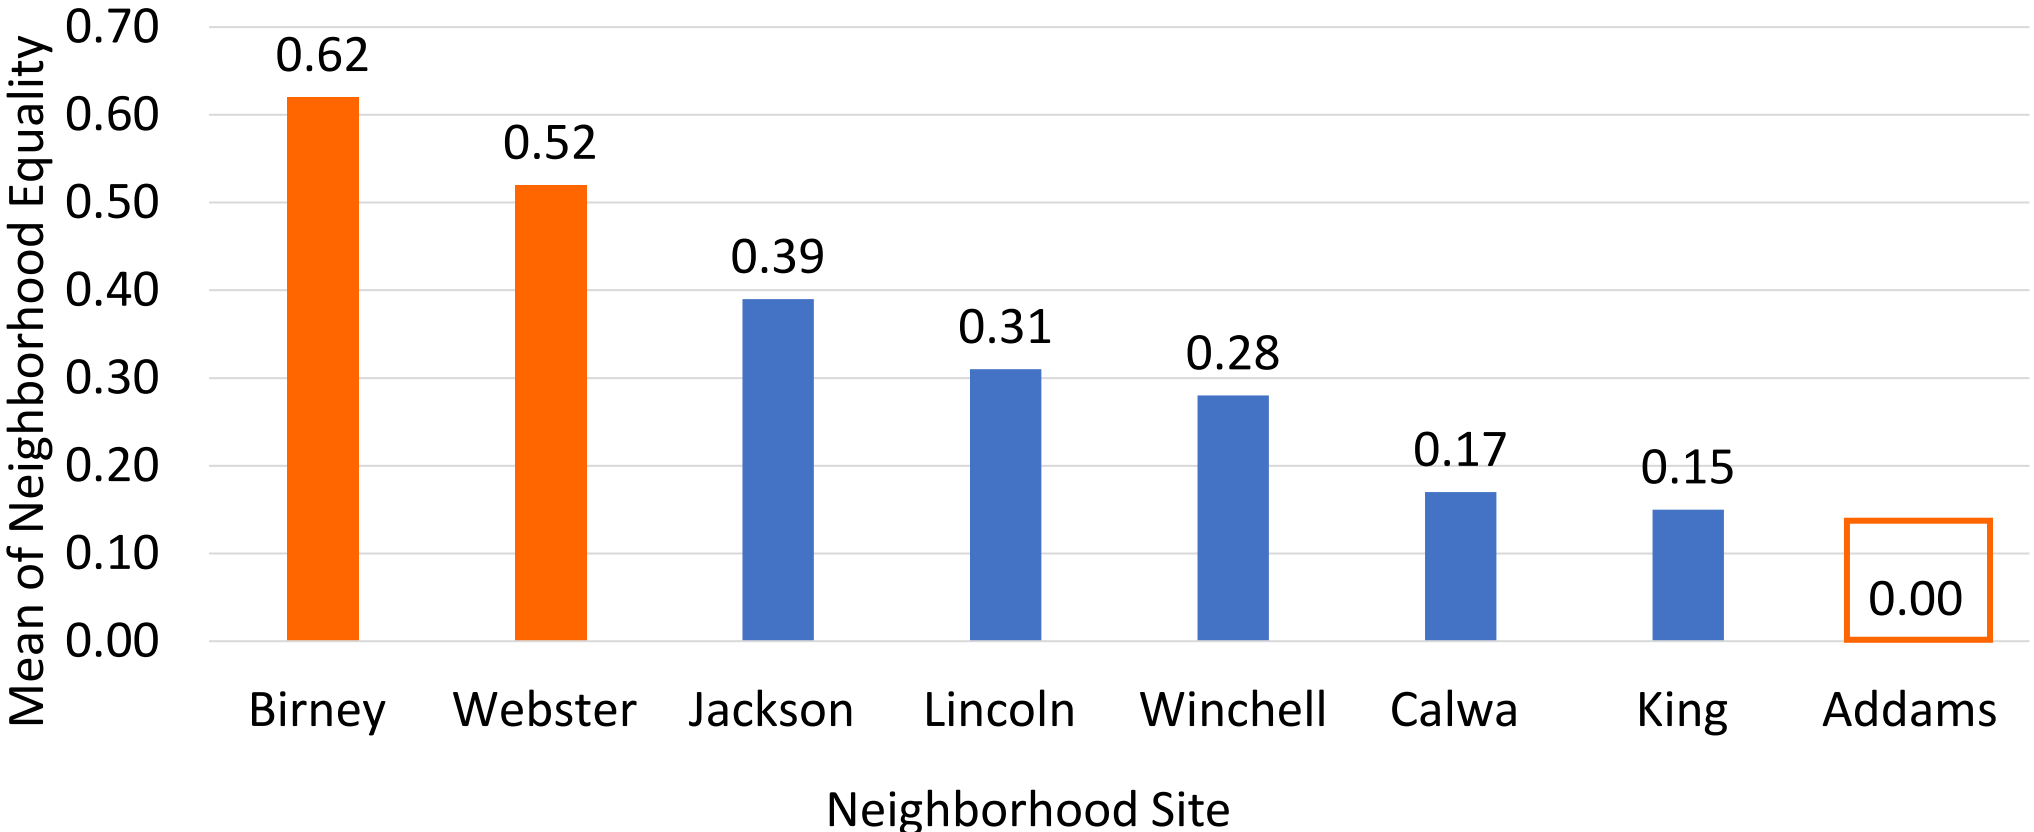

Findings: Self-efficacy Continued

Figure 3. Mean of Self-efficacy by Neighborhood Site

Findings: Neighborhood Equality

Figure 4. Mean of Neighborhood Equality by Neighborhood Site

Lessons Learned

- The survey both serves as a model of how to involve hub leaders and residents in research.
- Local CBOs and the government need to build trust with residents to increase civic engagement.
 - Younger people may need further motivation for engagement.
- Data indicates that residents need help trusting their local government and that there is a need for built civic infrastructure among these communities.

Limitations and Implications for Future Research

- The residents' participation in the *PE Community Member Survey* did not fully represent those living near the specified school areas.
- Self-reported information that could have potentially led to response bias.
- There is a potential for expanding research on data that was collected.

Recommendations

- Conduct a follow-up survey to compare with baseline data and track the level of community changes over time:
 - To comprehensively understand, comparing data across all neighborhood sites is important.
 - Receive snapshots of each neighborhood's progression to address neighborhood issues and their collective self-efficacy.
 - Identify shifts in community members' beliefs and attitudes toward their neighborhoods.

THANK YOU!
